

Asia Pacific Space Cooperation Organization (APSCO) Student Small Satellite Project has started. The project aims to design, build and launch, one small satellite and two CubeSats with the participation of students from member nations. One CubeSat will be built in Turkey, under the supervision of TUBİTAK-SPACE located on our campus. Our students are encouraged to take part in the various phases of the project, including design, analysis, and manufacturing of the CubeSat. They will also have a chance to attend the lectures given by the experts from member states. One lecture series is expected to be held on METU campus this summer. Please contact Prof. Dr. Ozan Tekinalp for further details.
