

Kick-off meeting of the Very Light Aircraft (VLA) (design, build, and fly) project was held on March 17, 2018 at Turkish Aerospace Industries facilities. The project is on the design and development of a very light category aircraft (less than 750 kg) by the METU students and professors, with the support of TAI personnel. It is a two year project where during the first year METU students and professors from aerospace, mechanical, electrical and industrial engineering and industrial design department will be take part. The aircraft will be build by TAI with the participation of the METU project team.
